### Job Market Paper:

It's About Time: Social Housing, Parental Labour Supply, and Long-term Child Outcomes [\[Paper\]](#)

**Abstract:** I assess the effect of highly subsidized social housing on both medium-term parental labour market outcomes and long-term child earnings and educational attainment. Using linked Canadian administrative data, I exploit variation in the timing of entry into social housing to identify the effects of additional exposure during childhood and find that children who enter earlier achieve better adult outcomes. For parents, event-study estimates around entry reveal substantial reductions in labour supply and earnings, with nearly no effect on net-of-housing-cost income. A simple time-allocation model—where social housing receipt both relaxes the budget constraint and insures parents against earnings uncertainty—rationalizes these large labour supply responses. I show that parental time is a key causal factor behind improvements in child outcomes by isolating exogenous labour supply responses using features of the program. These results highlight a critical trade-off between maximizing the return for children and the labour market participation of parents.
